NEURO-LOGIC is a foundational text about localization in the nervous system-the fundamental skill of clinical neurology. The material in this book is field-tested, and evolved from a syllabus the authors developed over many years of teaching introductory neurology to medical students. With a logical approach to the nervous system, the book takes readers step-by-step from the basics of the cerebral hemispheres and Brodmann areas to complex details about brainstem stroke syndromes, basal ganglia pathways, and brachial/lumbosacral plexi. It also contains a neuropsychiatry section exploring the relationship of frontal lobes and psychiatric disorders, and includes a section on special applications covering coma, epilepsy, movement, vertigo, cord compression, and autonomics. Written by renowned neurological educators, this concise primer will serve students throughout medical school rotations, post-graduate residency training, and medical practice during the lifelong learning task of evaluating patients with neurological problems.
