This review of migraine prevention is presented in two parallel reports, one focusing on children and one on adults. Here we address migraine prevention in children 6 to 18 years old. According to the International Classification of Headache Disorders, second edition (ICHDII), migraine is a common disabling primary headache disorder manifesting in attacks that last from 4 to 72 hours. Migraine headaches range from moderate to very severe and are sometimes debilitating. Migraine frequency is classified as either episodic or chronic according to the number of monthly migraine days, with episodic being less than 15 days, and chronic being 15 days or more. Migraine may also be described as chronic when attacks recur over long periods of time. Chronic migraine affects 2 of children and adolescents. Migraine treatments aim either to ameliorate acute attacks or prevent attacks. Many children with frequent or severe migraine need preventive treatment. Our review focuses on preventive treatments for childhood migraine. The Food and Drug Administration has approved no drugs for migraine prevention in children; therefore, pediatricians prescribe drugs approved for adults or off-label drugs (approved for clinical conditions other than migraine prevention). The off-label drug classes that were used cause common and serious adverse effects, including metabolic and hormonal abnormalities. Preventive pharmacologic treatments for migraine in children should be based on the efficacy and safety of the drugs, whether approved for adults or used off label. Preventive treatment aims to eliminate headache pain. Often, however, some pain persists; therefore, treatment success is usually defined by a decrease in migraine frequency of 50 or more after 3 months. In addition to pain relief, preventive drugs can decrease severity of migraine attacks and reduce restrictions in daily...
