

Model Abstraction in Dynamical Systems: Application to Mobile Robot Control

Filesize: 3.06 MB

Reviews

It in a of the most popular pdf. It really is full of knowledge and wisdom Its been developed in an exceptionally easy way and it is just right after i finished reading through this publication by which really altered me, alter the way in my opinion.

(Dr. Alexa Rogahn)

MODEL ABSTRACTION IN DYNAMICAL SYSTEMS: APPLICATION TO MOBILE ROBOT CONTROL

Springer-Verlag GmbH Sep 2008, 2008. Taschenbuch. Book Condition: Neu. 237x156x11 mm. Neuware - The subject of this book is model abstraction of dynamical systems. The primary goal of the work embodied in this book is to design a controller for the mobile robotic car using abstraction. Abstraction provides a means to represent the dynamics of a system using a simpler model while retaining important characteristics of the original system. A second goal of this work is to study the propagation of uncertain initial conditions in the framework of abstraction. The summation of this work is presented in this book. It includes the following: - An overview of the history and current research in mobile robotic control design. - A mathematical review that provides the tools used in this research area. - The development of the robotic car model and both controllers used in the new control design. - A review of abstraction and an extension of these ideas into new system relationship characterizations called traceability and -traceability. - A framework for designing controllers based on abstraction. - An open-loop control design with simulation results. - An investigation of system abstraction with uncertain initial conditions. 118 pp. Englisch.
