In all places, and at all times, it has been true that the alluvial lands excel all others in fertility and durability. The valley of the Nile, long known as the grainery of the world, is but one example out of thousands. The soil of the bottom lands of the rivers is made up of a mixture of all of the materials derived from the various rocks exposed to weathering in the valley above. At the same time with every flood large quantities of leaves and other .vegetation is washed over the flooded lands and deposited with the sand, clay, silt, or other material. These deposits are built up with every flood, gaining in depth from year to year. Need of Their Protection. But it has also been true in most places that the same floods that build up and render these bottom lands fertile have prevented their use for agriculture to a greater or less degree. Where the overflow is...
