

# Bonding Theory for Metals and Alloys (Hardback)

By Frederick E Wang

ELSEVIER SCIENCE TECHNOLOGY, United Kingdom, 2005. Hardback. Book Condition: New. 240 x 170 mm. Language: English . Brand New Book. Bonding Theory for Metals and Alloys exhorts the potential existence of covalent bonding in metals and alloys. Through the recognition of the covalent bond in coexistence with the free electron band, the book describes and demonstrates how the many experimental observations on metals and alloys can all be reconciled. Subsequently, it shows how the individual view of metals and alloys by physicists, chemists and metallurgists can be unified. The physical phenomena of metals and alloys covered in this book are: Miscibility Gap between two liquid metals; Phase Equilibrium Diagrams; Phenomenon of Melting. Superconductivity; Nitinol; A Metal-Alloy with Memory; Mechanical Properties; Liquid Metal Embrittlement; Super plasticity; and, Corrosion. The author introduces a new theory based on Covalon conduction, which forms the basis for a new approach to the theory of superconductivity. This new approach not only explains the many observations made on the phenomenon of superconductivity but also makes predictions that have been confirmed. This book openly recognizes the electrons as the most important and the only factor in understanding metals and alloys. It proposes Covalon conduction theory, which carries current...

#### Reviews

Extensive guide for publication fans. It can be rally exciting through studying time. It is extremely difficult to leave it before concluding, once you begin to read the book.
